

VBS® RADIO PRO

The next wave in radio communications for VBS3

Communication is critical for tactical training and it's essential for battlespace operations. VBS® Radio enables radio and direct voice communications between users in VBS®3 training exercises and filterable voice playback for After Action Review.

At a Glance

VBS Radio is the new in-game voice communications system for VBS3, introduced for free in VBS3 v3.7.2. VBS Radio offers user-friendly setup of global, side, group and direct speech communication channels. VBS Radio Pro offers additional features and is available for purchase through BISim.

VBS® Radio Pro features

- unlimited channels,
- configuration of radio network presets, enabling users to customize channel names, colors, icons and enable saving and loading of radio networks per mission,
- distance-based degradation that can also be influenced by weather effects in the simulation, and
- support for sidetone playback.

Key Benefits

Seamless integration - Built from the ground up by BISim, VBS Radio offers seamless integration with VBS3 including After Action Review.

User friendly - Prominent in-game display provides clear feedback when using radios and in-game prompts provide visual cues for users when switching radio channels in scenarios.

Enhanced immersion - Pro version offers advanced features like degradation and simulated radio channel frequencies.

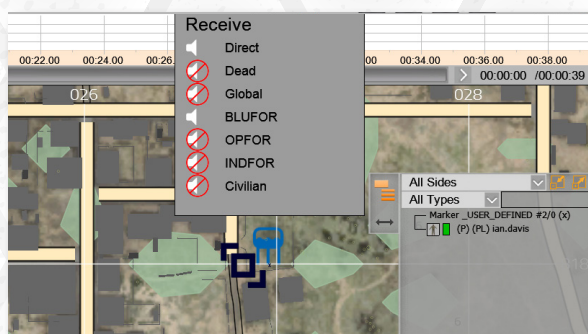

VBS® Radio Pro Roadmap

BISim is planning to develop VBS Radio Pro's capabilities to include

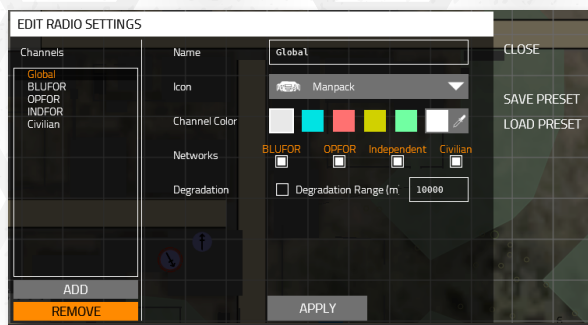

- support for DIS,
- a GUI for configuring options such as DIS radio mapping and multicast, and
- degradation based on terrain masking.

3D directional voice capability

Integrated with AAR

Unlimited channels with VBS® Radio Pro
